Estimación básica de una encuesta con diseño multi-etápico

Vasquez Arriaga Jorge

3 Estimación básica de una encuesta con diseño multietápico

Considerando la Encuesta Nacional de Vivienda (ENVI) 2020

https://www.inegi.org.mx/programas/envi/2020/

Se quiere generar los resultados básicos presentados en el tabulado llamado Cuadro 5.1, ver Figura 1 (https://www.inegi.org.mx/contenidos/programas/envi/2020/tabulados/envi 2020 tema 05 xlsx.zip)

En éste proyecto se busca:

- I. Describir brevemente el diseño de muestreo usado en la encuesta.
- II. Identificar las variables asociadas al diseño de muestreo que están presentes en la base de datos a usar (THOGAR en https://www.inegi.org.mx/programas/envi/2020/#Microdatos)
- III. Identificar la pregunta y variable asociada a la identificación de los Hogares con necesidad de rentar, comprar o construir una vivienda independiente de la que habitan.
- IV. Estimar el número total de hogares y el porcentaje de hogares que tienen una necesidad de vivienda a nivel nacional y por entidad federativa.
- V. Calcular intervalos de confianza para los parámetros estimados en el inciso anterior.

El código del proyecto se encuentra en https://github.com/arriagajorge/diseno-multietapico-survey.

Estimaciones puntuales.

Hogares por entidad federativa, según condición de tener necesidad de rentar, comprar o construir una vivienda independiente de la que habitan

Cuadro 5.1

		Condición de necesidad de vivienda						
Entidad federativa	Total de hogares	Si		No		No especificado		
		Absolutos	Relativos	Absolutos	Relativos	Absolutos	Relativos	
Estados Unidos Mexicanos	36 210 467	7 628 562	21.1	28 529 481	78.8	52 424	0.1

Figura 1: Parte del cuadro 5.1 de los resultados de la ENVI 2020

SECCIÓN IIIa. DEMANDA Y NECESIDADES DE VIVIENDA					
Pregunta	Nemónico	Tipo	Tamaño	Códigos Válidos	Concepto
[1]	[2]	[3]	[4]	[5]	[6]
3a.1 ¿Alguna de las personas de este hogar tiene necesidad o está planeando rentar, comprar o construir una vivienda, independientemente de la que habitan actualmente?	P3A1_1	Alfanumérico	1	1	Sí
				2	No
				9	No sabe

Figura 2: Pregunta de interés, demandas y necesidades de vivienda

Se usó un diseño probabilístico, cuyo diseño muestral fue bietápico, donde en la primera etapa se usó un diseño de muestreo estratificado y en la segunda etapa un diseño de muestreo por conglomerados.

A continuación se muestra el código en R, usado para replicar los resultados.

```
# leer la base de datos

thogar <- data.table::fread("THOGAR.csv")

# P3A1_1 es la variable a la que nos interesa replicar la estimación
# primero observamos que no hay N.A. por lo cual no es necesario hacer correciones</pre>
```

```
thogar2 <- thogar %>% drop_na(P3A1_1)
length(thogar2$P3A1_1) == length(thogar$P3A1_1)
## [1] TRUE
# un vistazo a las variables que usaremos en el diseño muestral
summary(thogar[, c("UPM_DIS", "EST_DIS", "FACTOR")])
